Commissioner Powell,XM gained access to the transmitters that allow them to do local broadcasting by lying about their intentions. They said they would only use them to fill in the holes in their satellite coverage and would not attempt to supplant local broadcasters--most of who are a part of the communities they serve--with localized programming. They lied. They should not be allowed "squatters rights" as a reward for their deceit. They are charging the public for a service and using the public's airwaves to do it. Please put an end to this sham--just as the courts have put an end to satellite television's violation of local TV broadcasters' legal rights when they were importing distant signals. Thank you. John Cottingham
